The Analogical Mind
Deidre Gentner
2001-03-02
Analogy has been the focus of extensive research in cognitive science over the past two decades. Through analogy, novel situations and problems can be understood in terms of familiar ones. Indeed, a case can be made for analogical processing as the very core of cognition. This is the first book to span the full range of disciplines concerned with analogy. Its contributors represent cognitive, developmental, and comparative psychology; neuroscience; artificial intelligence; linguistics; and philosophy. The book is divided into three parts. The first part describes computational models of analogy as well as their relation to computational models of other cognitive processes. The second part addresses the role of analogy in a wide range of cognitive tasks, such as forming complex cognitive structures, conveying emotion, making decisions, and solving problems. The third part looks at the development of analogy in children and the possible use of analogy in nonhuman primates. Contributors Miriam Bassok, Consuelo B. Boronat, Brian Bowdle, Fintan Costello, Kevin Dunbar, Gilles Fauconnier, Kenneth D. Forbus, Deidre Gentner, Usha Goswami, Brett Gray, Graeme S. Halford, Douglas Hofstadter, Keith J. Holyoak, John E. Hummel, Mark T. Keane, Boicho N. Kokinov, Arthur B. Markman, C. Page Moreau, David L. Oden, Alexander A. Petrov, Steven Phillips, David Premack, Cameron Shelley, Paul Thagard, Roger K.R. The Art of Bassoon Playing
William Spencer
1969
Fine bassoon teachers are a rarity in all but cities with major symphony orchestras and/or a university with a distinguished music department faculty. William Spencer took up the challenge of providing material for the serious bassoonist with *The Art of Bassoon Playing*, published in 1958. With William Spencer's approval, Frederick Mueller took on the task of bringing to notice recent changes in bassoon playing, pedagogy, and manufacture, resulting in revised edition of *The Art of Bassoon Playing*.

Life on the Line
Kevin Twaddle
2012-09-20
Kevin Twaddle was a footballer who was always prepared to take a risk on the park but it was off it where he really gambled. The former Hearts, Motherwell and St Johnstone winger speaks openly for the first time about his secret betting addiction that saw him blow more than a million pounds and wrecked his football career. Kevin tells his harrowing story of what his punting did to his family, how it killed relationships, destroyed his bond with his daughter and almost caused his parents to split up. He talks about his addiction and how it led to him stealing, going to loan sharks, left him facing jail and considering the ultimate gamble - suicide - before he finally got his life back on the straight and narrow. Kevin, who has since gone on to play pool for Scotland, has now not had a bet for more than six years, holds a prominent position in gamblers Anonymous and also uses his experiences to help the Professional Footballers Association (Scotland) to educate today's footballers on the pitfalls of gambling. This is the harrowing and moving story on how one man's life fell apart spectacularly because of his addiction to gambling and how, after hitting rock bottom, he finally managed to conquer his demons.

The Call, a Trilogy, Part III, Good Vs. Evil
James Allan Mattie
2005-09-27
Part III of this trilogy begins with the surprising discovery that James Markham has a half-sister residing in San Diego, California and during his fateful visit he finds himself in the middle of a robbery case that demands his involvement in freeing an innocent man from prison. His unwitting exposure to the media places Markham in the cross-hairs of former enemy terrorists whose several attempts on his life nearly cause his demise. Nonetheless, Markham survives to pursue further challenges that fate places before him while it sets the stage for his eventual confrontation as the Biblical Truth-Seeker with the most powerful American politician identified in the Bible Code by the Secret Society of Jesuits as the Anti-Christ. Embodied Cognition, Acting and Performance
Experience Byron
2018-12-07
In this collection of essays, the four branches of radical cognitive science—embodied, enactive and ecological—will dialogue with performance, with particular focus on post-cognitivist approaches to understanding the embodied mind-in-society; de-emphasising the computational and representational metaphors; and embracing new conceptualisations grounded on the dynamic interactions of “brain, body and world”. In our collection, radical cognitive science reaches out to areas of scholarship also explored in the fields of performance practice and training as we facilitate a new inter- and transdisciplinary discourse in which to jointly share and explore common reactions of embodied approaches to the lived mind. The essays originally published as a special issue in *Connection Science*.

Cutting Loose
Tara Janzen
2007-12-26
She's the unsuspecting beauty with something everybody wants. He's the secret agent in so deep nobody can find him. Until now... CIA operative Zachary Prade made his name taking out world threats. But now he's tracking a very different kind of danger and her name is Lily Robbins. Lily holds the key to a valuable encoded file that's about to fall into the wrong hands. All Zach has to do is retrieve the key and forget the rain-soaked beauty who came to his Central American plantation seeking shelter from more than the weather. Lily knows him as Alejandro Campos, the seductive drug lord who saved her life. They met when she traveled to El Salvador to film a documentary...and got caught in the middle of a nasty drug-and-guerrilla war. Now, back in the U.S., hunted by spooks and assassins, Lily has to trust Campos again. Except his name isn't Campos, and he's arousing a passion so hot it's criminal. That is, if they can survive long enough to enjoy it... From the Paperback edition.

Assessments, Treatments and Modeling in Aging and Neurological Disease
Colin R. Martin
2021-06-28
Assessments, Treatments and Modeling in Aging and Neurological Disease: The Neuroscience of Aging is a comprehensive reference on the diagnosis and management of neurological aging and associated disorders. The book discusses the mechanisms underlying neurological aging and provides readers with a detailed introduction to the aging of neural connections and complexities in biological circuitries, as well as the interactions between genetics, epigenetics and other micro-environmental processes. It also examines pharmacological and non-pharmacological interventions of age-related conditions that affect the brain, including Alzheimer's, stroke and multiple sclerosis. Provides the most comprehensive coverage of the broad range of topics related to the neuroscience of aging. Features sections on diagnosis and biomarkers of neurological aging, Alzheimer's and stroke. Contains an abstract, key facts, a mini dictionary of terms, and summary points in each chapter. Focuses on neurological diseases and conditions linked to aging, environmental factors and clinical recommendations. Includes more than 500 illustrations and tables.

The Dog Who Knew Too Much
Spencer Quinn
2011-09-29
In the dog who knew too much, Chet and Bernie attend a P.I. convention to try and make some new (and hopefully lucrative) connections. It's the sort of thing Bernie hates, but he's got to do something to get his business back on track. The head of a big international security company seems impressed with the Little Detective Agency and hires them for what appears to be an easy and well-paid assignment. Things take an unexpected turn and all sorts of trouble ensues. Tensions are further strained when a stray puppy who looks an awful lot like Chet turns up. So does Dylan McKnight, Suzie Sanchez's former boyfriend. With Chet and Bernie both dealing with affairs of the heart at the same time they are facing an unexpectedly tricky case, it's a good thing that our two intrepid investigators are looking out for each other-as they always do.

CliffsNotes on Hemingway's The Old Man and the Sea
Jeanne SalladT Criswell
2011-05-18
The original CliffsNotes study guides offer expert commentary on major themes, plots, characters, literary devices, and historical background. The latest generation of titles in this series also feature glossaries and visual elements that complement the classic, familiar format. In *CliffsNotes on The Old Man and the Sea*, you explore Hemingway's short masterpiece about Santiago, an old man who conquers a magnificent fish, endures its heart-breaking loss, and rises gallantly above his defeat. This study guide takes you along on Santiago's journey by providing summaries and critical analyses of each of the book's parts. You'll also explore the life and background of the author, Ernest Hemingway, easily the most recognizable name in American literature. Other features that help you study include Character Analyses of major players, A Character Map that graphically illustrates the relationships among the characters. Critical essays on topics like Hemingway's style and themes in the novella. A review section that tests your knowledge. A Resource Center full of books, films, and Internet sites. Classic literature or modern-day treasure—you'll understand it all with expert information and insight from CliffsNotes study guides.

Rethinking Rationalisation: Evolutionism and Imperialism in Max Weber's Discourse on Music.
Ana Petrov
2016-02-17
Max Weber as a sociologist of music? Scrutinising an array of nineteenth-century discourses on the concept of 'development' in music, Ana Petrov focuses on Max Weber's theory of rationalisation in music, which led him to see 'rationalised' music as the most 'developed', the most 'complex' and the 'best' music that the whole of civilisation had ever achieved. Weber was convinced that his analysis could prove that the 'peak' of the rationalisation process was to be found in the 'great' masterpieces of German composers, starting with Johann Sebastian Bach and finishing with Richard Wagner. Petrov argues that Weber's allegedly 'neutral' concepts were far from 'innocent' and 'ideology-free', but rather outcomes of his social and intellectual background. She explores the implications of Weber's concept of rationalisation in music, discussing correlations between the theories of evolution and rationalisation and the paradigm of cultural imperialism, which can be recognised in Weber's promulgation of the superiority of Western music traditions.

objects and collecting in different historical, social and institutional contexts, an international, interdisciplinary group of authors consider the meanings and values with which objects are imputed and the processes and implications of collecting. This includes considering the entanglement of objects and collectors alike in webs of social relations, the creation of value and social change; object biographies and the stories – often conflicting – that objects come to represent; and the strategies used to reconstruct and retell the narratives of objects. The book includes considerations of individual objects and groups of objects, such as domestic interiors, Chinese Buddhist artefacts, novelty tea-pots, Scottish stone monuments, African ~~decorative objects, a 1992 colonial painting and memorials to those killed on the roads in Australia.~~ It also contains chapters dealing with particular collectors – including Charles Bell and Beatrix Potter – and representational techniques.

SPENCER ACADIA 2020-11-26
Library and Information Studies for Arctic Social Sciences and Humanities serves as a key interdisciplinary title that links the social sciences and humanities with current issues, trends, and projects in library, archival, and information sciences within shared Arctic frameworks and geographies. Including contributions from professionals and academics working across and on the Arctic, the book presents recent research, theoretical inquiry, and applied professional endeavours at academic and public libraries, as well as archives, museums, government institutions, and other organisations. Focusing on efforts that further Arctic knowledge and research, papers present local, regional, and institutional case studies to conceptually and empirically describe real-life research in which the authors are engaged. Topics covered include the complexities of developing and managing multilingual resources; working in geographically isolated areas; curating combinations of local, regional, national, and international content collections; and understanding historical and contemporary colonial-industrial influences in indigenous knowledge. Library and information studies for Arctic social sciences and humanities will be essential reading for academics, researchers, and students working the fields of library, archival, and information or data science, as well as those working in the humanities and social sciences more generally. It should also be of great interest to librarians, archivists, curators, and information or data professionals around the globe.

Building a New World
Jean-Louis Cohen
2021-01-12
An essential exploration of how Russian ideas about the United States shaped architecture and urban design from the czarist era to the fall of the U.S.S.R. Idealized representations of America, as both an aspiration and a menace, played an important role in shaping Russian architecture and urban design from the American Revolution until the fall of the Soviet Union. Jean-Louis Cohen traces the powerful concept of “Amerikanizm” and its impact on Russia’s built environment from early czarist interest in revolutionary America, through the spectacular World’s Fairs of the 19th century, to department stores, skyscrapers, and factories built in Russia using American methods during the 20th century. Visions of America also captivated the Russian avant-garde, from El Lissitzky to Moisei Ginzburg, and Cohen explores the ongoing artistic dialogue maintained between the two countries at the mid-century and in the late Soviet era, following a period of strategic competition. This first major study of Amerikanizm in the architecture of Russia makes a timely contribution to our understanding of modern architecture and its broader geopolitics.

Rockets and People
Boris Chertok
2013-04-29
Much has been written in the West on the history of the Soviet space program but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoirs of Academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Twenty-seven years later, he became deputy to the founding figure of the Soviet space program, the mysterious “Chief Designer” Sergey Korolev. Chertok’s sixty-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes, Academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society’s quest to explore the cosmos. In Volume 1, Chertok describes his early years as an engineer and ends with the mission to Germany after the end of World War II when the Soviets captured Nazi missile technology and expertise. Volume 2 takes up the story with the development of the world’s first intercontinental ballistic missile (ICBM) and ends with the launch of Sputnik and the early Moon probes. In Volume 3, Chertok collects the great successes of the Soviet space program in the 1960s including the launch of the world’s first space voyager Yuriy Gagarin as well as many events connected with the Cold War. Finally, in Volume 4, Chertok meditates at length on the massive Soviet lunar project designed to beat the Americans to the Moon in the 1960s, ending with his remembrances of the Energia-Buran project.

The 525 notable works of 19th and 20th century American fiction in this reference book have many stage, movie, television, and video adaptations. Each literary work is described and then every adaptation is examined with a discussion of how accurate the version is and how well it succeeds in conveying the spirit of the original in a different medium. In addition to famous novels and short stories by authors such as Nathaniel Hawthorne, F. Scott Fitzgerald, and Willa Cather, many bestsellers, mysteries, children's books, young adult books, horror novels, science fiction, detective stories, and sensational potboilers from the past two centuries are examined.

Hello World
Hannah Fry
2019-03-28
‘One of the best books yet written on data and algorithms... deserves a place on the bestseller charts.’ (The Times)
You are accused of a crime. Who would you rather determined your fate - a human or an algorithm? An algorithm is more consistent and less prone to error of judgement. Yet a human can look you in the eye before passing sentence. Welcome to the age of the algorithm, the story of a not-too-distant future where machines rule supreme, making important decisions - in healthcare, transport, finance, security, what we watch, where we go even who we send to prison. So how much should we rely on them? What kind of future do we want? Hannah Fry takes us on a tour of the good, the bad and the downright ugly of the algorithms that surround us. In *Hello World* she lifts the lid on their inner workings, demonstrates their power, exposes their limitations, and examines whether they really are an improvement on the humans they are replacing.

The R Book
Michael J. Crawley
2007-06-13
The high-level language of R is recognized as one of the most powerful and flexible statistical software environments, and is rapidly becoming the standard setting for quantitative analysis, statistics and graphics. R provides free access to unrivalled coverage and cutting-edge applications, enabling the user to apply numerous statistical methods ranging from simple regression to time series or multivariate analysis. Building on the success of the author's bestselling *Statistics: An Introduction* using R, *The R Book* is packed with worked examples, providing an all inclusive guide to R, ideal for novice and more accomplished users alike. The book assumes no background in statistics or computing and introduces the advantages of the R environment, detailing its applications in a wide range of disciplines. Provides the first comprehensive reference manual for the R language, including practical guidance and full coverage of the graphics facilities. Introduces all the statistical models covered by R, beginning with simple classical tests such as chi-square and t-test. Proceeds to examine more advance methods, from regression and analysis of variance, through to generalized linear models, generalized mixed models, time series, spatial statistics, multivariate statistics and much more. *The R Book* is aimed at undergraduates, postgraduates and professionals in science, engineering and medicine. It is also ideal for students and professionals in statistics, economics, geography and the social sciences.
